The drastic reduction of carbon emissions presents an urgent need for our economy and climate. For this reason, at GRECOTEL, as leaders in hospitality in Greece and Mediterranean, we recognize our duty not only to reduce our carbon footprint, but also to influence the hospitality industry towards a net zero economy.

Our primary source of emissions is from the operation of our hotel, Grecotel Amirandes.

At Grecotel Amirandes we encourage suppliers to set goals around reducing their environmental and social impact.

We remain committed to minimizing our environmental footprint by reducing energy consumption, optimizing water usage, and minimizing waste generation.

THERE IS NO PLANET B

*Fighting
Climate Change*

We recognize climate change to be a critical threat to our planet, our communities and our business, and we've made combatting it a top business priority.

Environmental Program

Grecootel Environmental Program was used as an example in the publication Agenda 21 for the Global Travel & Tourism Industry. It includes activities inside and outside the hotels and it focuses in **4 Key Performance Indicators (KPI)**:

01. Energy
02. Water
03. Waste & Recycling
04. Chemicals

2023

Energy 1.941.427 kWh

Efficient use

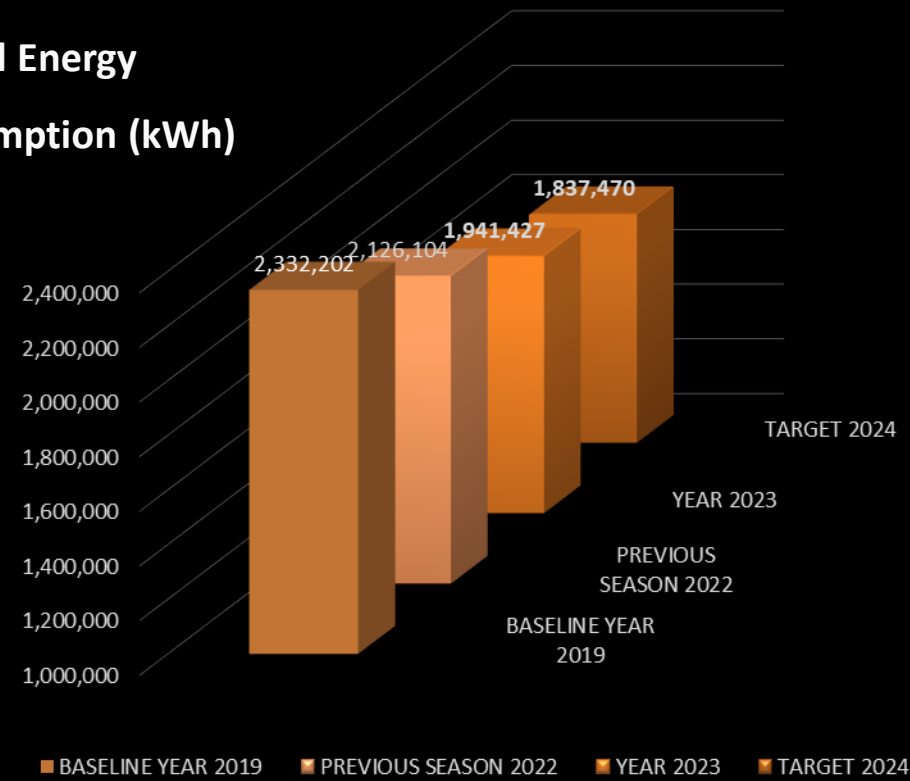

Energy consumption is the main contributor to direct and indirect GHG emissions which affect the climate change. By creating the necessary infrastructure and using the latest available technology in energy management, we endeavor to reduce our energy consumption and maximize the use of renewable energy. Advanced materials and systems are installed in the buildings to reduce energy consumption. These include:

- Energy-efficient window panels.
- A high-quality, external wall insulation system that significantly reduces energy losses by wrapping the building in a thermally resistant envelope.
- Low energy technology lighting.
- Electronic lighting ballasts.
- Central lighting control systems.

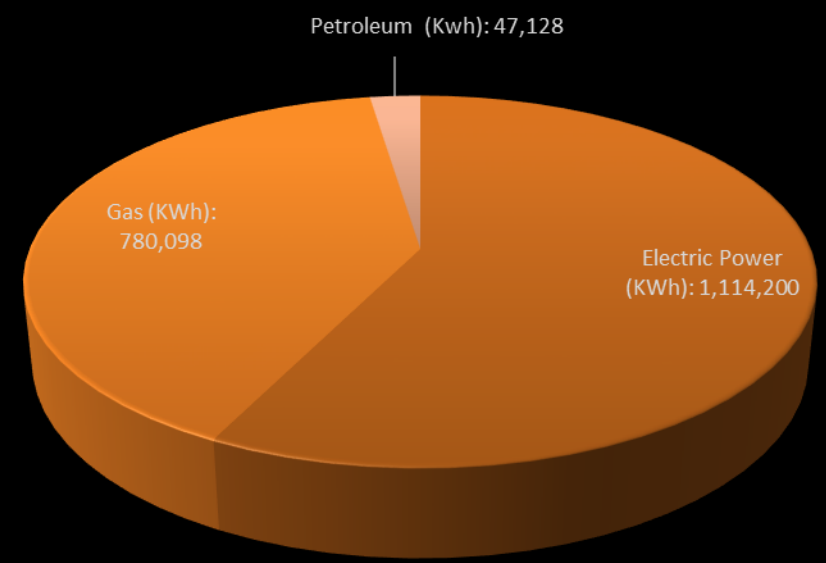

OUR EFFORTS
CONTRIBUTE TO
THE SUSTAINABLE
DEVELOPMENT
GOALS:

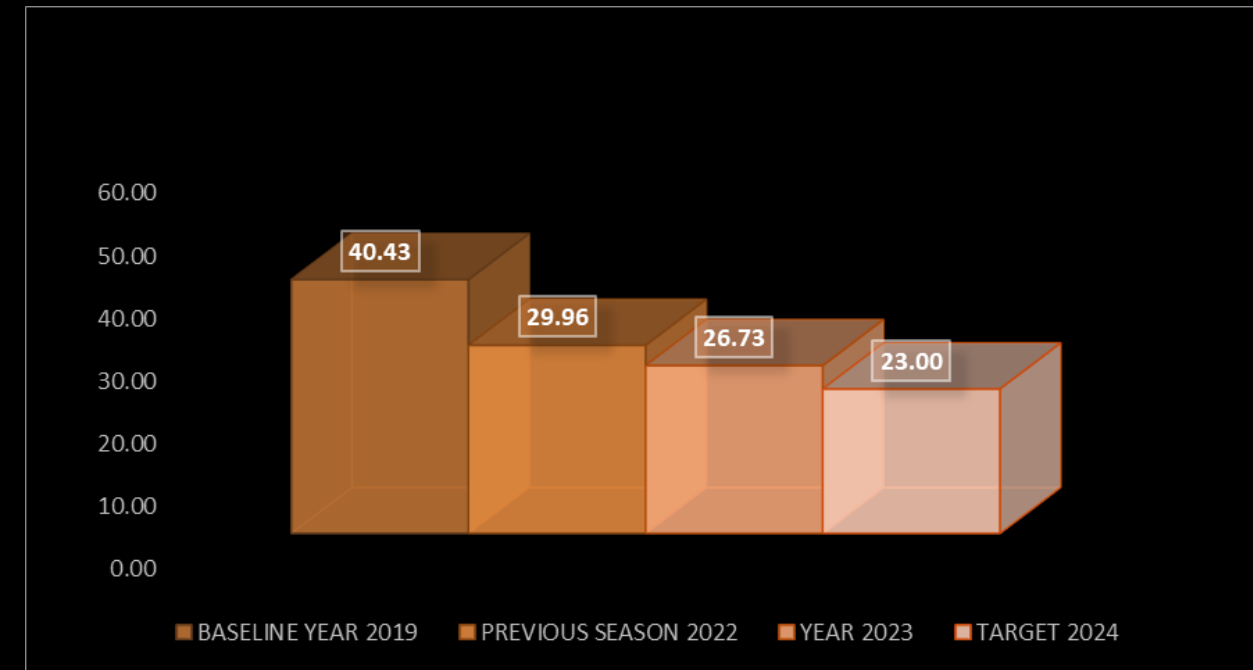

Annual Energy Consumption (kWh)

Energy Consumption per Source

Annual Energy consumption per accommodation

Energy Reduction

- Hotel operations are aligned with best practice energy management techniques and technology.
- The Greotel Amirandes Green Goal is to improve the energy efficiency of the buildings and minimize energy consumption year after year.
- Greotel Amirandes continues to train all staff in energy and carbon management in order to decrease energy use.

In 2023, energy consumption was reduced by almost 17% compared to 2019. In addition, energy intensity was reduced by 26%.

Energy Consumption

Based on the average energy usage (gas consumption in liters per guest and energy consumption in kWh per night), there are three categories of hotels in Greece, according to applicable legislation and statistics:

- A hotel is considered an energy “diamond” for average consumption of up to 0.30 liters of gas per guest and up to 16 kWh of average electricity consumption per guest.
- Very good to excellent for average energy consumption of up to 0.70 liters of gas per guest and 24 kWh of average electricity consumption per guest.
- From 0.70 liters to 0.90 liters of average gas per guest and 25 - 30 kWh of average electricity consumption per guest, the hotel is considered energy-intensive and requires energy saving interventions.

In 2023, Grecootel Amirandes’ energy consumption was:

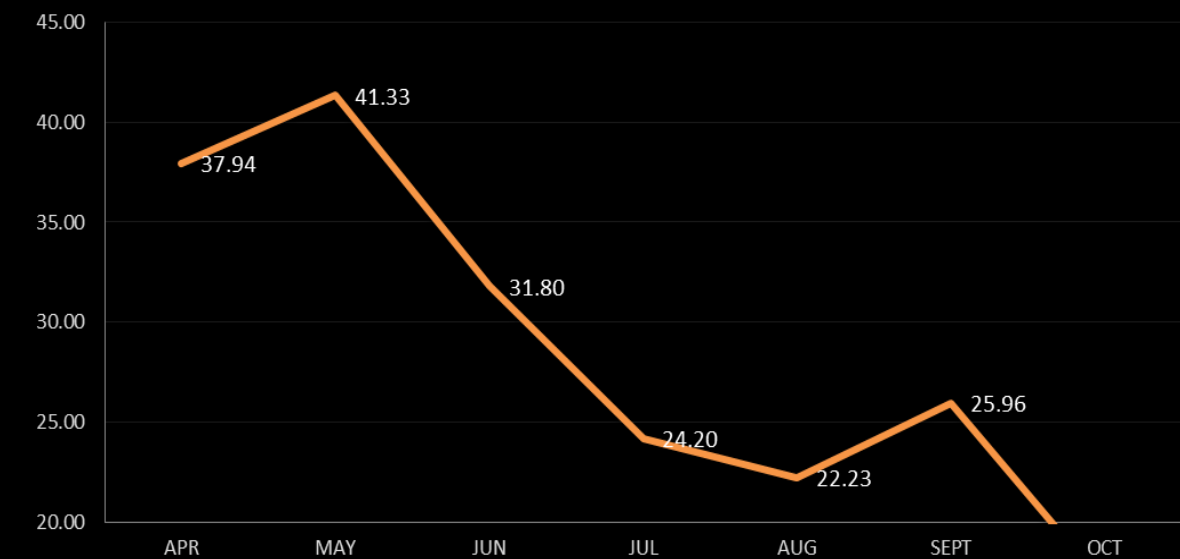

**1,26
liters**

**of average gas
consumption per guest**

**15,34
kWh**

**of average electricity
consumption per guest.**

MONTHLY ENERGY CONSUMPTION PER GUEST DAY

MONTHLY ENERGY CONSUMPTION

Energy Assessment

Greccotel Amirandes has proceeded with investments, aiming to the efficient use of energy. Specifically:

- Obtain increased efficiency through proper maintenance of the Cooling system.
- Use natural cooling techniques.
- Use Night ventilation techniques, ceiling fans.
- Use super metal halide fluorescent lamps.
- Use electronic fluorescent ballasts.
- Electric magnetic keycards for the automatic interruption of lighting and electrical appliances .
- Use improved luminaries.
- Motion sensors, timing devices.
- Use daylight effectively within the building.
- Public awareness and communication.
- Use high-efficiency equipment when replacing old equipment throughout the hotel.
- Use Solar panels in order to heat the water.
- Provide information and reminders for guests and staff.

The main energy consuming consumption sources in a hotel are:

- cooling rooms
- lighting
- hot water use and other energy consuming activities by guests
- preparing meals
- laundry
- swimming pools
- other

■ Airconditioning ■ Lighting
■ Kitchen and Laundry Equipment ■ Warm Water Boilers
■ Maintenance

The relative importance of the different energy end-uses is described as follows: Air conditioning (heating/cooling, ventilation), accounting for approximately 24% of the total consumption. Hot water usage is the second largest user, accounting for up to 28% of the total energy demand. Such as catering and laundry also account for a considerable share of energy consumption, (15%). Finally, 5% is used for lighting.

Water Reduction

ENVIRONMENTAL RESPONSIBILITY

Water scarcity is a recognized global problem, with demand for water projected to exceed supply by 40% by 2030. At Grecotel Amirandes we recognize the value that water has for both human life and nature. The Grecotel Sustainability Program places great emphasis on water conservation, actively demonstrating this way our commitment to environmental protection through the conservation of both aquatic and marine ecosystems.

OUR EFFORTS CONTRIBUTE TO THE
SUSTAINABLE DEVELOPMENT GOALS:

Water

The implementation of a sustainable tourism development is directly linked with the availability of water resources.

Continuous efforts are made to reduce water needs. Grecotel Amirandes follows all the national and international legislation ensure that the source of the water does not affect the local supply or local environment in any way.

All wastewater is disposed of in a controlled way in order to protect areas lying outside the boundaries of a property from becoming contaminated by water, chemicals, pollutants, effluent and other materials.

Water Highlights for 2023

Our water use increased in 2023 compared to the previous year, partly due to climate factors like high temperatures and dry periods. While leak detection and repairs reduced water loss, we're taking these climate impacts into account for further actions next year to optimize water management.

Regular monitoring to ensure that
100%
of the rooms have water reduction filters

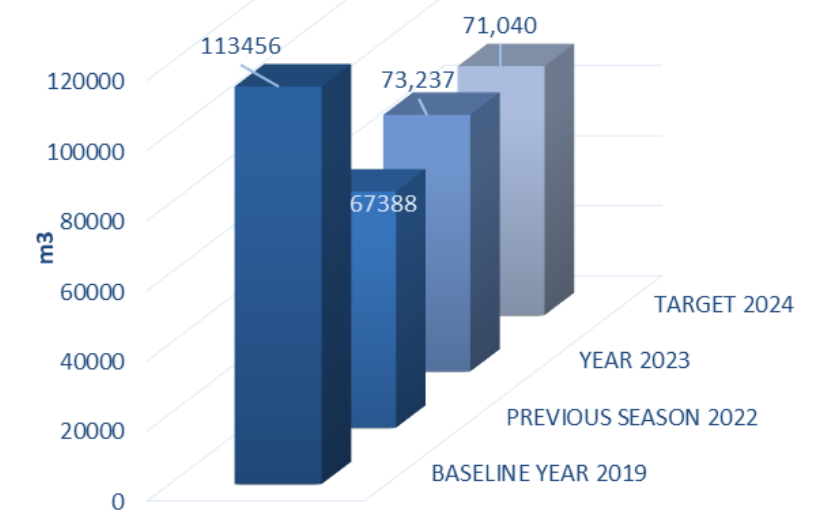

The quality of water is monitored in cooperation with accredited laboratories.

WATER - SAVING MEASURES

Below you can see the most important actions taken in order to reduce Water consumption:

- Linen & Towel washing reduction policy.
- Water reduction filters to all taps of the hotel.
- Double tank toilet flushes.
- Regular maintenance to prevent leaks.
- Automatic night watering the green areas and the organic fields of the hotel.
- Application of drip irrigation systems and underground irrigation systems with reduced water evaporation.
- Run the washing machine only with a full load.
- Desalination/reverse osmosis and filtration units.
- Taps in kitchens have a maximum flow of 10 litres per/min.
- We give the opportunity to our guests to reduce the water consumption (Water reduction info material in all rooms).
- We communicate and educate the management's commitment for water reduction and goals to all employees.

Annual Water Consumption

Monthly Water Consumption

A series of water-saving measures have been applied, based on best available practices that focus on consumption monitoring (e.g. leak control, improved efficiency), including educational programs for visitors.

Water Assessment

The first step was to start measuring water consumption and set some tangible targets. It's vital to know our starting point (baseline year) and find out how much water is consumed and how it is divided among the various uses such as in the guest rooms and common areas.

The main water consuming activities in a hotel are:

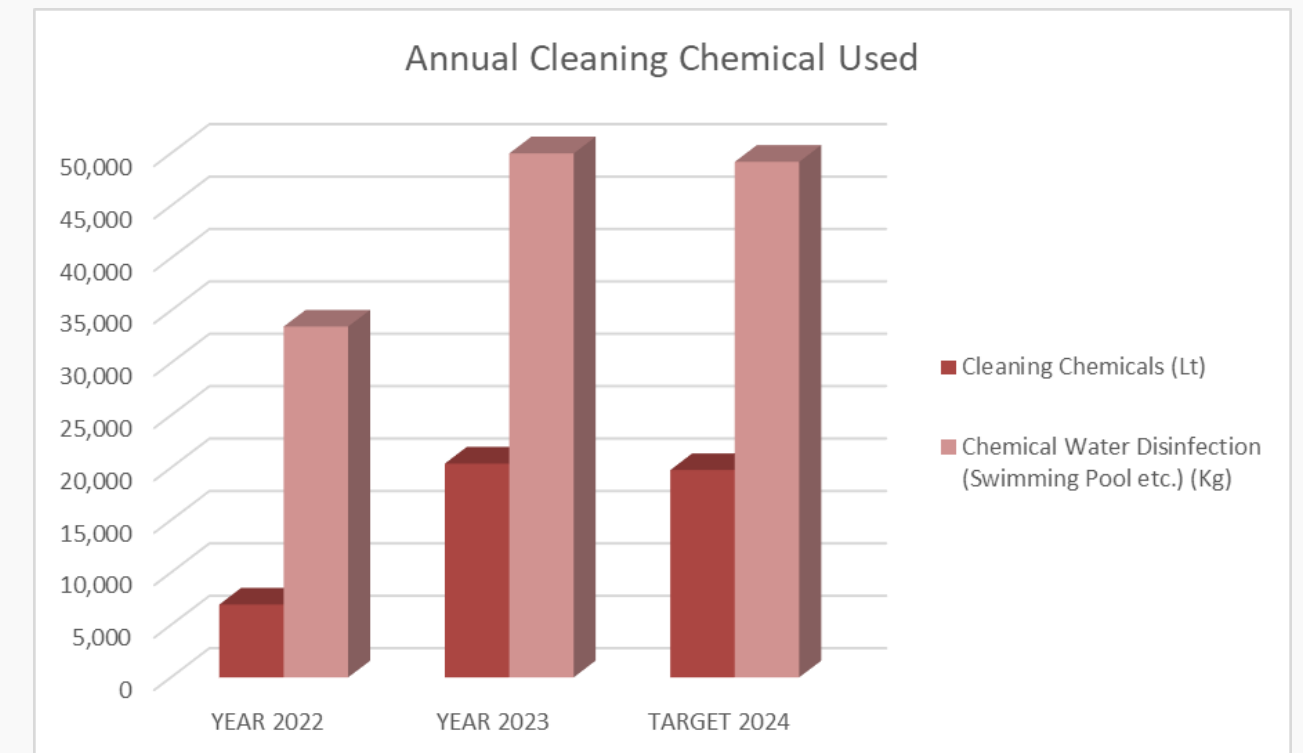

- Guest Rooms (30%)
- Kitchen (10%)
- Laundry (15%)
- Gardens (20%)
- Restrooms & public toilets (3%)
- Rest (HVAC, Pools etc) (22%)

Chemical Use

USE OF ENVIRONMENTALLY FRIENDLY CHEMICALS

Driven by a high sense of environmental awareness, Greotel Amirandes chooses to use certified cleaners and chemicals, with environmentally friendly specifications regarding both their packaging and composition. This way we achieve a great balance of cleaning effectiveness along with environmental protection. Furthermore, we apply a new model of alternative gardening, avoiding the use of chemical fertilizers and pesticides, further emphasizing the statement that the safety of our guests, our partners and the natural environment is a top priority for us.

All chemicals used are evaluated in terms of sustainability criteria and are applied with dosage systems in order to ensure efficient usage.

Consumption is **monitored on a monthly basis** and is measured with a guest per night indicator.

Frequent staff training for proper use.

Waste Management

Waste management is an integral part of our waste management policy, as Greotel actively contributes to a more circular economy. Aiming to become a Zero Waste company, we have developed and implement an integrated waste management strategy that results to waste elimination through waste cross utilization and recycling.

We ensure that all operations and activities at Greotel Amirandes are in compliance with all current national waste management regulations. At every stage of our operation, we are devoted to reducing waste output by applying reduction, training, and recycling approaches.

OUR EFFORTS CONTRIBUTE TO THE SUSTAINABLE DEVELOPMENT GOALS:
